What is the voltage of a 12V AGM deep cycle battery?

As you can see, the voltage of a 12V AGM deep cycle battery ranges from 13.00V to 10.50V. Example of how to use this chart: Let's say that you measure the voltage on the 12V AGM battery; it reads 12.10V. That means that the battery still has between 50% and 60% charge (55%, to be exact). This is true for all 12V AGM deep cycle batteries.

Are 12V AGM batteries corrosive?

Our 12 Volt AGM batteries for solar applications DO NOT leak or vent corrosive acid, and DO NOT require filling. These are maintenance free absorbed glass matt (AGM) batteries. Typically, a 12V AGM battery will last 2-3 times longer than a wet battery and won't require weekly maintenance.

What is the voltage difference between 12V and 24V AGM batteries?

This is true for all 12V AGM deep cycle batteries. Here is the 24V AGM battery voltage chart as well: With this higher voltage 24V deep cycle battery, the voltage ranges from 26.00V at 100% charge to 21.00V at 0% charge; the

absolute voltage difference between a full and an empty battery is 5.00V.

How long does a 12V AGM battery last?

Typically, a 12V AGM battery will last 2-3 times longer than a wet battery and won't require weekly maintenance. These are perfect for remote hard to access applications and where the batteries will be stored inside since they do not vent to the atmosphere.
