This article proposes an energy storage capacity configuration planning method that considers both peak shaving and emergency frequency regulation scenarios.

Why do energy storage clusters deftly discharge energy during peak load periods?

During peak load periods, energy storage clusters deftly discharge stored energy to alleviate grid strain, concurrently adjusting power output in response to frequency variations to uphold grid stability .

What is the difference between dedicated frequency regulation and peak shaving?

All dedicated frequency regulation energy storage stations are allocated solely for the purpose of frequency regulation, while all dedicated peak shaving energy storage stations are exclusively utilized for peak shaving.

Can energy storage be used for peak shaving?

Energy storage has bidirectional regulation ability, fast response speed, simple control, and flexible installation position, and it can be an effective method for system peak shaving .

Can new energy storage methods based on electrochemistry contribute to peak shaving?

New energy storage methods based on electrochemistry can not only participate in peak shaving of the power grid but also provide inertia and emergency power support. It is necessary to analyze the planning problem of energy storage from multiple application scenarios, such as peak shaving and emergency frequency regulation.

Does BES provide emergency frequency regulation in energy storage planning?

(1) Compared to traditional energy storage planning methods focusing solely on peak shaving and frequency regulation, this paper considers the

emergency frequency regulation capability of BES during planning, ensuring frequency security in the event of N- k faults.
