In this regard, a new generation of Li-ion batteries (LIBs) in the form of all-solid-state batteries (ASSBs) has been developed, attracting a great deal of attention for their high-energy density and excellent mechanical-electrochemical stability. This review describes the current state of research.

All-solid-state batteries (ASSBs) have emerged as a promising solution to address the limitations of traditional lithium-ion batteries (LIBs). These batteries offer the potential to revolutionize industries ranging from electric vehicles to renewable energy systems. By replacing the liquid.

An all-solid-state lithium-ion battery (AS-LiB<sup>®</sup>) is a battery that uses solid substances for all its constituent materials. Kanadevia has developed a proprietary manufacturing method that utilizes machining technology. This manufacturing method eliminates the mechanical pressurization required.
