A solar battery allows you to store electricity produced by your solar panels and use it later or, in some cases, sell it back to the grid to make a few quid – but they're not cheap. Read on to see if it's worth getting a solar storage battery for your home. This is the first incarnation of this.

Solar batteries are worth it, as they allow you to enjoy free, green energy even in moments when your solar panels aren't actively producing electricity. As a result, you can reduce your carbon footprint and your energy expenses further. If you have solar panels and are considering pairing them.

That's where solar batteries come in. Solar batteries let you store and use more of the energy your panels produce, instead of sending it back to the grid. By adding a battery, you can significantly boost your savings, reduce your reliance on rising electricity prices, and make the most of every.

Put simply, solar batteries allow you to store the excess energy your panels generate and don't use during the day. In fact, without a battery around 50% of the energy your panels generate goes unused. Batteries effectively revolutionise solar, allowing you to use the energy your panels generate.

Yes, solar batteries can be worth the investment for many UK homeowners and landlords, especially in 2025, with rising energy costs, improved technology, and increasing government support. They enable you to: Whether a battery is worth it depends on several factors: system size, energy usage.

A solar battery allows you to store surplus electricity generated by your solar panels during the day, which can be used later—often in the evenings or during cloudy periods, when your panels aren't generating as much. Without a battery, any excess energy flows back to the grid and you only benefit. What is the cost of solar batteries in the UK?

In the UK, solar batteries cost anywhere between £2,000 and £3,000. The price varies based on the battery's capacity, chemical composite, life cycle, and the supplier you choose.

Is a solar battery worth it?

It's incredibly difficult to quantify whether a solar battery will be worth it, as every household has different energy usage patterns. According to The Eco Experts, a typical three-bedroom home could save around £582 every year with a solar battery AND solar panel system. Yet most of this saving will come from the solar panels.

Why should you consider buying a solar battery?

Solar batteries offer several benefits, including reducing your UK home's reliance on the grid and enhancing energy independence. They allow you to store excess solar energy generated during the day for use at night or on days with less sunlight.

Should you buy a solar panel or a battery?

Depending on your battery's storage capacity size, you can enjoy backup power for several hours (even 24 hours or more in some cases). Potentially increased home value: Solar panels and batteries can be attractive features to people buying a new home.

How much VAT does a solar storage battery cost?

So now you can install a standalone energy storage battery or add one to your existing solar PV system, and you'll pay 0% VAT. From 1 April 2027, this is set to increase to 20% VAT.
