

Auxiliary power supply of energy storage power station

Overview

What are auxiliary power supplies?

This includes auxiliary power transformers, switchboards and cables. The auxiliary power supply circuit must be designed to meet the BESS product's technical requirements, which vary by product. For example, the rated voltage of the auxiliary power supply might be 400V, 480V, or 208V.

What is the auxiliary power system?

Like the emergency power system, the auxiliary power system is subdivided into four trains. The 380 V switchgears are each assigned to the 6.6 and 13.2 kV bus and are each fed by 6.6 and 13.2 kV/400/400 V three-winding transformers, respectively. All low-voltage switchgears are provided with one incoming supply.

What is auxiliary power / grid power?

Auxiliary power or grid power is used to supply the peripheral devices initially to prepare the fuel cell stack ready to supply power to demands. Air pump is running 100% for 15 sec to blow off any possible water accumulation in the cathode circuit.

What is the rated voltage of auxiliary power supply?

For example, the rated voltage of the auxiliary power supply might be 400V, 480V, or 208V. The circuit must also be sized based on the peak auxiliary load of the selected BESS product and the specific project configuration. Each BESS product has a unique auxiliary load design and peak auxiliary load.

Who is responsible for auxiliary power supply?

When an external auxiliary power supply is required, project owners or their EPC (engineering, procurement and construction) contractors are typically responsible for designing, furnishing and installing the auxiliary power supply circuit. This includes auxiliary power transformers, switchboards and cables.

What are the requirements for auxiliary power supply circuits?

The auxiliary power supply circuit must be designed to meet the BESS product's technical requirements, which vary by product. For example, the rated voltage of the auxiliary power supply might be 400V, 480V, or 208V. The circuit must also be sized based on the peak auxiliary load of the selected BESS product and the specific project configuration.
