

# **Average NMC battery storage price per 5kW in China**

## Overview

---

How much does a battery cost in China?

Sources are reporting that Chinese domestic battery cell prices are \$70-75/kWh for LFP and \$80-90/kWh for NMC. This is significantly lower than BMI's (Benchmark Mineral) weighted global cell price average of below \$100. This would mean \$30 per kWh lower prices would mean \$1950 lower prices on a 65 kWh battery pack.

How much does a 65 kWh battery cost in China?

This would mean \$30 per kWh lower prices would mean \$1950 lower prices on a 65 kWh battery pack. According to my sources Chinese domestic cell prices are \$70-75/kWh for LFP and \$80-90/kWh for NMC.

Why are EV batteries so expensive in China?

The battery glut is partly due to softening EV sales, but also due to a headlong rush into battery production. In 2022, 50 Chinese battery companies announced capacity expansions of almost \$200 billion that would produce enough batteries for 30 million EVs.

What is the Fastmarkets battery Cost Index?

The Fastmarkets Battery Cost Index is an easy-to-use cost model for total cell costs, including cost breakdown of active anode material (AAM), cathode active material (CAM), separator, electrolyte, other materials, energy, labor and operational costs across multiple chemistries and geographies.

Will China's energy storage capacity grow in 2021?

13.1GW, more than double the amount reached in 2021. Ahead and heading into a new era for new energy, it is expected that China's energy storage capacity and its BESS capacity in particular will grow at a CAGR rate of 44% between 2023 and 2027. Finally, BESS development financing globally thus far has stemmed from various sources: funds, corpor.

Does China have a market advantage for battery storage systems?

ds, and service networks for battery storage systems. At present China does have some market advantages when it comes to the development of BESS infrastructure, including the supply chain related to global lithium-ion battery production,
