

# **Average PV energy storage price per 200MW in Spain**

## Overview

---

The average price awarded in PV was 53.87 €/MWh, significantly higher than that of the two previous auctions, due to the evolution and prospects of electricity market prices and electricity futures prices.

The average price awarded in PV was 53.87 €/MWh, significantly higher than that of the two previous auctions, due to the evolution and prospects of electricity market prices and electricity futures prices.

The Transmission System Operator, Red Eléctrica de España (REE), has reported that the utility-scale PV capacity connected to the grid reached 23.804,4 MWdc in 2022, with an additional 5.612,4 MWdc of new centralized PV capacity. However, this figure only accounts for utility-scale installations.

Platts has launched an “interactive explorer” tool that shows the capture price received by wind and solar power assets, using hourly production and monthly average price data for Spain, Germany, Italy, France, and the United Kingdom. Image: Maxim Grama y Andreas Franke, S&P Global Commodity.

Renewable energy is currently experiencing substantial development in Spain. With the goal of reaching climate neutrality by 2050, the country is implementing measures to achieve a 100 percent renewable electricity mix by that year. Although wind is currently the most used renewable resource in the.

The frequency of low prices (<20 €/MWh) peaks at the end of this decade and then decreases throughout the horizon due to the integration of storage sources, as they add demand during low-price hours. The frequency of very high prices (>100 €/MWh) is reduced dramatically between 2024 and 2029;.

The installed capacity of photovoltaic solar energy now exceeds 32.000 MW. (25% of the national total) and continues to grow at a rate higher than the European average, according to Red Eléctrica de España. Most of this capacity corresponds to large ground-based plants, concentrated in regions such.

Spain’s household electricity prices now stand at over EUR 0.30/kWh on

average. In addition, Spain's reliance on fossil gas has increased price volatility in recent years.<sup>16,17,18,19</sup> This variability, combined with Spain's excellent solar resources, make the economics of combining solar with. What is Spain's battery storage market?

Spain's battery storage market is dominated by customer-sited systems. Utility-scale storage remains nascent. Currently, Spain's storage market is mainly composed of small-scale batteries co-located with solar PV. Spain's household electricity prices now stand at over EUR 0.30/kWh on average.

Is combining solar and storage a good idea in Spain?

This variability, combined with Spain's excellent solar resources, make the economics of combining solar with storage increasingly favorable. The market for utility-scale batteries has been almost non-existent until recently as the market has lacked a clear policy and regulatory framework.

How has Spain's solar PV industry changed over the years?

Spain's solar PV industry has undergone a significant transformation, particularly in the industrial sector, highlighting the growing trend towards self-consumption for energy cost reduction and sustainability.

How much energy storage will Spain have in 2024 - 2043?

Aim to ensure the effective deployment of energy storage. Spanish storage capacity from the current 8.3 GW, to 20 GW in 2030 and 30 GW in 2050. The PNIEC scenario for the hourly pool price projection calculation for the 2024 - 2043 horizon has been carried out by the Advisor based on PNIEC objectives using the software xPryce®.

Is solar energy a renewable resource in Spain?

Although wind is currently the most used renewable resource in the Mediterranean country, solar energy is growing at a very fast pace. In fact, the solar capacity installed has more than quintupled in the last five years. In 2023, Spain was the sixth country worldwide in terms of new capacity additions.

Will Spain achieve 20GW of storage by 2030?

In addition, Spain has developed a national storage roadmap that includes a target to achieve 20GW of storage by 2030. However, current levels of

customer-sited storage adoption already exceed its 2030 targets.<sup>37</sup> To date, neither has been sufficiently attractive to mobilize investments at scale.

## Average PV energy storage price per 200MW in Spain
