This function is known as Maximum Power Point Tracking (MPPT) and is carried out at a rate of accuracy of over 99%. With the sunset, when the energy offered is no longer enough to feed the utility transmission grid, the inverter automatically cuts off the connection to the grid and stops operating.

Net-Metering is a billing arrangement in which people use photovoltaic

systems to generate electricity through solar power and export their surplus energy back to the grid of the EAC. The difference between the energy produced by the photovoltaic system and used for the electricity needs of the.
