Average gas prices dropped by 38% in 2023 to US\$1.6c/kWh for both industry and households (back to 2017 levels), after an 11% increase in 2022 and a doubling in 2021. Prices for industry are equivalent to those in the United States, but prices for households are 70% lower. Total energy consumption.

In 2023 and the first half of 2024, the average price of natural gas used for power generation in Mexico, derived from Henry Hub and Waha prices, was approximately 2.38 USD/MMBTU. This relatively low-price environment helped to moderate electricity costs, despite the increased demand and.

The regulatory landscape for energy storage in Mexico is still evolving, with a lack of clear and consistent regulations causing uncertainty for investors and developers. While supportive policies exist, access to financing remains a hurdle for many projects, particularly smaller-scale.

capacity (kWh/kWp/yr). The bar chart shows the proportion of a country's land area in each of these classes and the global distribution of land area across the class at a height of 100m. The bar chart shows the distribution of the country's land area in each of these classes compared to the global.

The average electricity price in Mexico has increased from 119.52 USD/MWh in 2022 to 151.60 USD/MWh in 2023. Since 2017, the average electricity price in Mexico has fluctuated between 111.14 USD/MWh (2017) and 151.60 USD/MWh (2023). The top amount of capacity installed in Mexico in 2023 was in.

Compared to US storage capacity of 6 months, Mexico has 4 days on average. LPG is the only commodity in Mexico with storage capacity above 4 days (6 days) PEMEX sells extremely cheap fuel to CFE which is now replacing gas, at approximately \$1. We hoped Mexico was committed to going green but it. Can a battery energy storage system complement a PV plant in Mexico?

An analysis was carried out to verify if it would be commercially feasible to operate a Battery Energy Storage System (BESS) to complement the operation of a PV plant in the Mexican market. This PV plant would generate a revenue through the contracting via the 2015, 2016 or 2017 LTAs in Mexico.

How much does a power plant cost per MW?

This value is in line with typical market conditions worldwide, where the contracted operation of such services is typically between 150,000 USD and 400,000 USD (3 to 8 million MXN) per MW and year.

Is electrical energy storage system use case a source of revenue?

An Electrical Energy Storage System use case for the capacity component only exists if a capacity component was awarded in the auctions. Therefore, no revenue can be generated from the results of the 2015 auctions due to a lack of awarded capacity bids. However, capacity is a possible source of revenue from the 2016 and 2017 auctions.

What does Article 28 of the Energy Act mean for Mexico?

- Article 28: The amendment stipulates that the Mexican State will be the sole entity responsible for the national electricity system and its control. The amendment emphasizes preserving the country's energy self-sufficiency to ensure low electricity rates without profit motives, and to guarantee national security and.

Can energy storage systems be re-used?

As most energy storage systems are coupled through inverters, most best practices from PV and wind power plants can be re-used. Care has to be taken since EESS differ from PV and wind power plants since they do not only export energy, but import energy as well.
