

# **Average enterprise ESS system price per 8MW in Italy**

## Overview

---

How much energy storage capacity does Italy have?

As of November 2024 Italy had 5.1 GW / 11.7 GWh of energy storage capacity. This is almost exclusively small-scale residential system, with utility-scale storage systems providing just 864 MW. To help achieve the target for utility-scale storage build-out, the Italian government has implemented the MACSE subsidy scheme as supporting legislation.

How does Italy's electricity market work?

Zonal Market Dynamics: Italy's electricity market is a zonal market, with seven geographic zones affecting short-term price volatility and influencing BESS investment strategies. MACSE Subsidy Scheme: The new MACSE scheme offers 15-year contracts for energy storage projects and guarantees indexed linked revenue.

What are Italy's energy storage goals?

Energy Storage Goals: To balance the grid with increased renewable energy, Italy targets 11 GW / 58 GWh of grid-scale energy storage capacity by 2030, requiring substantial investment and development.

Which region has the most Bess market in Italy?

The North Italy region constitutes the most developed BESS market in Italy, attributed to its high industrial and population concentration. The Central Italy region is also well-advanced in terms of BESS adoption, owing to the burgeoning demand for renewable energy and grid balancing requisites.

Is Bess a good investment in northern Italy?

While Northern Italy currently has the largest installed BESS capacity in the country, a build-out of RES in the South is increasing energy price volatility, creating a more compelling investment case for BESS in this region.

How does Bess manage peak demand in Italy?

Management of Peak Demand: The pronounced peak demand for electricity in Italy during peak hours can strain the grid. BESS play a role in managing this peak demand by supplying stored energy when needed, reducing grid stress and minimizing the use of fossil fuel-based peaker plants.
