

# Average grid tied storage system price per 800kW in New Zealand

## Overview

---

How much can you save with a grid tied solar system?

You can save between 40% to 50% off the power consumption portion of your monthly power bill with a grid tied system. This depends on your location and assumes the sizing (number of solar panels) is carefully considered based on your official regional sunshine hours. Hybrid Battery-Ready Solar (Grid-Tied).

What is a grid tied solar system?

Grid Tied Solar. A grid tied (or grid tie) system consists of a standard string inverter that does not have the capability to connect battery storage. They are becoming less popular nowadays because of this limitation. It may be worth considering if you are constrained by your budget and you do not intend to ever add battery storage.

What is hybrid battery storage (grid tied)?

Hybrid Battery Storage (Grid Tied). This system comes with a hybrid inverter (as above) plus a battery bank connected. The battery bank will be accessed after dark or during low-light conditions. Depending on the size, you could save 70% to 80% off the power component of your power bill – sometimes even more.

What are grid-scale batteries & how can they benefit New Zealand?

Grid-scale batteries maximise the benefits of renewable energy and provide extra resilience during times of tight electricity supply. Additionally, these batteries, alongside more renewable generation, will help off-set the retirement of thermal generation and support New Zealand's transition to a low-emissions economy.
