

Average off grid battery system price per 15MW in Ethiopia

Overview

How much does a solar PV mini-grid cost in Africa?

Stand-alone solar PV mini-grids or solar PV-hybrid mini-grids have installed costs in Africa ranging from USD 1.9 to USD 5.9/W for systems greater than 200 kW. Solar PV mini-grids that came online in 2012 or earlier have higher costs.

How much does solar PV cost in Africa?

On-grid commissioned and planned utility-scale solar PV projects between 2014 and 2018 in Africa range from around USD 1.2 to USD 4.9/W (USD 1 200 to 4 900/kW). Although Africa is currently home to a very small set of utility-scale solar PV projects, costs have been declining over time.

How much does a battery cost?

The costs for batteries in these systems vary between around USD 1.2 and USD 3.4/Ah. All of these SHS for which data are available utilise either simple lead-acid batteries, or deep-cycle lead-acid batteries, with no clear cost distinction between the two with data available.

How much does a battery and charge controller cost?

There is a wide range of costs for the battery and charge controllers for sub-1 kW systems, from USD 2.5 to USD 6.8/W. The system cost, excluding the battery and charge controller, ranges from a low of USD 1.8/W to a high of USD 13.9/W. These systems in the dataset are based on direct current (DC) and avoid the need for an inverter.

How much does a deep cycle battery cost?

Deep-cycle lead-acid batteries are a proven, relatively cheap electricity storage solution. For the data available for sub-1 kW SHS in Africa, average costs are around USD 2/Amp-hour (Ah) for battery storage capacities of 20 Ah to 220 Ah.

How often do electrical outages occur in Africa?

Eleven countries in Africa experience an average of 10 or more electrical outages per month, and five experience an average of 20 outages or more per month (World Bank, 2015c). The average duration of these outages in sub-Saharan Africa was 4.6 hours, with 17 countries having outage durations that exceed this average.
