

# Average photovoltaic ESS price per 250kW in Greece

## Overview

---

How much energy will be produced from photovoltaic energy sources?

According to the optimistic scenarios of the Ministry for Development 19.72% of the 72 TWh of electricity required shall be produced in the next years from renewable energy sources. The objective of producing energy from photovoltaic is 700 MWp until 2020.

How many MWp can a photovoltaic power plant produce?

The objective of producing energy from photovoltaic is 700 MWp until 2020. The solar energy sector shall receive a boost by means of the current Greek framework law on Renewable Energy Sources (3468/2006).

Will photovoltaic costs resume a decline early next year?

It adds that some analysts believe costs could resume the decline early next year as they expect delays in projects on an international scale. Greece may add 200 MW in photovoltaic capacity in the second half of the year compared to 130 MW from the first six months, the media outlet reported separately.

How is storage regulated in Greece in 2022?

In 2022, the Greek Parliament also passed a thorough regulatory framework for storage. Large-scale storage are selected through a bidding process, with a total tendered power capacity of 1,000 MW and at least 2.6 GWh of storage capacity.

What fossil fuels are used in Greece in 2024?

Natural gas remains the top fossil fuel, while coal (lignite) is being phased out—dropping to just 6% of generation in 2024. Oil is mostly used on non-interconnected islands. And for the first time, Greece became a net exporter of electricity in 2024, sending surplus power to neighboring countries through an expanding regional grid.
