The country has vast potential for solar power generation, with an average solar irradiation of 5.4 kWh/m<sup>2</sup> per day, making it one of the most promising locations for solar energy in South America. In addition, Bolivia's mountainous terrain and high wind speeds make it an ideal location for wind.

Thanks to a photovoltaic diesel hybrid power plant located in Pando's capital, Cobija, the region is now on course to having its own sustainable energy supply by eliminating its dependency on fossil fuels and increasing its electrification rate to 80 percent. By expanding its power plant to include.

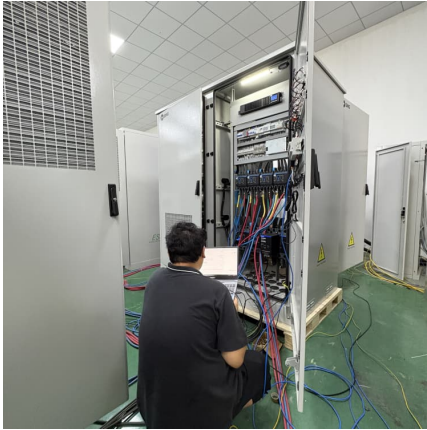

An investor has secured funding, identified a market, and drafted a comprehensive business plan for a new solar module factory—a seemingly sound project. Yet, operations are unexpectedly halted for several hours each month, damaging sensitive equipment and wasting significant material. The.

The world's largest PV-diesel hybrid power plant system with battery storage was commissioned in December 2014, in the Bolivian province of Pando. SMA is not only supplying photovoltaic inverters for this project, but is also providing an SMA Fuel Save Controller for demand-driven control of solar.
