

Average utility scale ESS price per 1MW in Argentina

Overview

What are base year costs for utility-scale battery energy storage systems?

Base year costs for utility-scale battery energy storage systems (BESSs) are based on a bottom-up cost model using the data and methodology for utility-scale BESS in (Ramasamy et al., 2023). The bottom-up BESS model accounts for major components, including the LIB pack, the inverter, and the balance of system (BOS) needed for the installation.

How much does a MWh system cost?

MWh (Megawatt-hour) is a measure of energy capacity (how long the system can continue delivering that power output). For example, a 1 MW / 4 MWh BESS has four hours of storage capacity. So, while the system might be \$200,000 per MW, the effective cost can be \$800,000 per MWh if it has four hours duration.

How will Argentina achieve net zero emissions in 2025?

Argentina aims to increase the share of wind and solar to 20% of electricity production in 2025 and reduce GHG emissions by 21% in 2030 compared to its 2007 emission peak. According to its Long-Term Strategy, the country aims to reach net zero emissions by 2050. Four companies represent 1/3 of the installed power capacity.
