

Battery energy storage company profit analysis

Overview

Does a grid-level battery energy storage system perform energy arbitrage?

The present work proposes a long-term techno-economic profitability analysis considering the net profit stream of a grid-level battery energy storage system (BESS) performing energy arbitrage as a grid service.

Do investors underestimate the value of energy storage?

While energy storage is already being deployed to support grids across major power markets, new McKinsey analysis suggests investors often underestimate the value of energy storage in their business cases.

What is a battery energy storage system?

Battery energy storage systems (BESS) are rechargeable batteries that can store energy from different sources and discharge it when required. BESS consists of one or more batteries that can balance the electric grid, deliver backup power, and enhance grid stability.

What is the market share of battery energy storage systems in 2024?

By connection type, on-grid installations held a 78% share of the battery energy storage system market in 2024; off-grid applications are the fastest-growing segment at 18.5% CAGR. By component, battery packs, and racks represented 63% revenue share in 2024; energy-management software is advancing the fastest, at 20% CAGR.

How do I evaluate potential revenue streams from energy storage assets?

Evaluating potential revenue streams from flexible assets, such as energy storage systems, is not simple. Investors need to consider the various value pools available to a storage asset, including wholesale, grid services, and capacity markets, as well as the inherent volatility of the prices of each (see sidebar, "Glossary").

Are battery energy storage systems a low-carbon flexible resource?

1. Introduction In the modern power network, battery energy storage systems (BESS) are playing a crucial role as low-carbon flexible resources, due to their ability to address renewable energy intermittency and to provide a wide range of grid services (e.g., energy arbitrage, frequency regulation, load-shifting) .
