

# California energy storage project prices

## Overview

---

As of September 2025, the average storage system cost in California is \$1031/kWh. Given a storage system size of 13 kWh, an average storage installation in California ranges in cost from \$11,392 to \$15,412, with the average gross price for storage in California coming in at \$13,402.

As of September 2025, the average storage system cost in California is \$1031/kWh. Given a storage system size of 13 kWh, an average storage installation in California ranges in cost from \$11,392 to \$15,412, with the average gross price for storage in California coming in at \$13,402.

As of September 2025, the average storage system cost in California is \$1031/kWh. Given a storage system size of 13 kWh, an average storage installation in California ranges in cost from \$11,392 to \$15,412, with the average gross price for storage in California coming in at \$13,402. After.

The cost of a California energy storage project can vary significantly depending on various factors. 1. Typical expenditures for lithium-ion systems range from \$400 to \$1,000 per kWh installed, adjusting for project specifics. 2. Utility-scale projects might exceed \$1,500 per kWh due to added.

California's statewide Demand Side Grid Support (DSGS) distributed storage program is projected to nearly double in capacity by 2028 and could provide up to \$206 million in net cost savings to Californians, according to a new report from The Brattle Group and commissioned by Sunrun and Tesla.

Details of the energy storage fleet, a key component in the state's transition to 100 percent clean energy by 2045, are now available in a new online dashboard unveiled by the California Energy Commission (CEC). The dashboard presents statewide information for the first time and features data on. What are California's new battery energy storage projects?

The Gateway and Moss Landing projects are just two of the battery energy storage installations being developed across California, a state that has ramped up its use of renewable energy in recent years while phasing out electricity from coal, nuclear, and natural gas-fired power plants.

What is California's 'Gateway' Energy Storage Project?

The Gateway installation is the latest in a series of large battery energy storage projects in California, a state counting on energy storage to help supplement its baseload power supply, and replace generation lost due to the closure of thermal power plants.

What is an energy storage project?

An energy storage project is a cluster of battery banks (or modules) that are connected to the electrical grid. These battery banks are roughly the same size as a shipping container. These are also called Battery Energy Storage Systems (BESS), or grid-scale/utility-scale energy storage or battery storage systems.
