

# **Can i use regular batteries on solar post caps**

## Overview

---

Can I use regular, non-rechargeable batteries in solar post cap light?

No, it's designed to power off of rechargeable batteries only. Using regular batteries will ruin the light. We do have Solar Collector Replacement Units available.

Can I use regular, non-rechargeable batteries in solar post cap light?

No, it's designed to power off of rechargeable batteries only. Using regular batteries will ruin the light. We do have Solar Collector Replacement Units available.

**Regular Batteries Are Not Recommended:** Using regular alkaline batteries in solar lights can lead to performance issues, including leakage and damage to the light's components. **Rechargeable Battery Types:** Solar lights typically use rechargeable batteries like Nickel-Cadmium (NiCd), Nickel-Metal.

Do not use regular/other batteries in the solar post cap light. The battery should last 3-5 years. The Solar Panel will last the lifetime of the light (15+ years). On a full charge, the lights will last more than 24 hours. This reserve is to help with cloudy day performance. The solar panel should.

Can I use regular, non-rechargeable batteries in solar post cap light?

No, it's designed to power off of rechargeable batteries only. Using regular batteries will ruin the light. We do have Solar Collector Replacement Units available. Please contact us to inquire about purchasing Solar Collector.

Batteries can be taken out of the post cap, or the tab can be reinserted into the battery compartment, to keep the light inactive. Keep in mind that batteries will need to be allowed to recharge when reinserted. Page 5 They must be replaced with rechargeable batteries – using regular batteries in.

Long lasting and rechargeable, we offer 2 types of batteries. Our newer solar post caps (2015 and later) typically use LiFeP04 3.2V AA solar batteries. The

earlier model solar post caps use the NiCd 1.2V rechargeable batteries. To determine the battery required for your specific model of post cap.

Last summer, a Chicago homeowner complained their solar post lights died faster than ice cubes in August. Turns out they'd been using regular AA batteries (facepalm moment). After switching to proper solar post cap lights battery replacement with NiMH cells?

Boom! Light restored. Property value. Do you need a solar post Cap Light?

The only expense for outdoor solar lighting is to replace the rechargeable batteries every 2 to 3 years. A solar post cap light will come on automatically at night, unlike electric that requires a timer, or for you to remember to flip the electric switch on. With solar, you will still have light outdoors during power outages.

What size battery does solar post Cap Light come in?

The Solar Post Cap Light comes with a 1000mAh Battery. Other features include fitting various fence sizes, RGB & Warm White 2 lighting modes, 20 LM, IP65 waterproof, ABS shell, glass lens, and black color (12 pack).

What kind of batteries do solar lights use?

Rechargeable Battery Types: Solar lights typically use rechargeable batteries like Nickel-Cadmium (NiCd), Nickel-Metal Hydride (NiMH), and Lithium-Ion, which are designed for repeated charging and optimal performance.

Do solar lights need batteries?

Maintaining an understanding of solar lights can empower you to keep your outdoor spaces bright and welcoming. Understanding the types of batteries in solar lights helps maintain their functionality and efficiency. Solar lights typically use rechargeable batteries designed for repeated charging cycles. Here's a breakdown of the common types.

How do I maintain my solar lights?

Proper Maintenance is Key: Regularly replacing rechargeable batteries, cleaning solar panels, and ensuring direct sunlight exposure are essential for maintaining the efficiency of solar lights.

Are alkaline batteries good for solar lights?

Regular batteries, such as alkaline batteries, aren't suitable for solar lights. They lack the ability to recharge and commonly drain quickly after one use. Alkaline Batteries: While these batteries are widely available and inexpensive, they risk leakage if left in devices for extended periods.
