Overview

Can you use solar panels without battery storage?

If battery storage isn't in the cards for now, don't worry! You can still use your solar panels to power your home without battery storage. In fact, a majority of home solar systems aren't connected to battery storage. Here's how it works: Early morning and evening are times with lower solar production, but higher energy needs.

Can you use solar power without a battery?

Another application for solar power systems without a battery is a well pump. You can use these pumps for several purposes: In both cases, the solar panels are connected to a controller. Depending on the type of controller, you can set the timing or install a switch to turn the pump on manually.

How does a solar system work without battery storage?

Without battery storage, solar systems typically use the utility grid as a battery. Solar energy is first used to directly power your home and the excess energy is pushed onto the local grid to power neighboring systems. When the solar system is underproducing, the home draws electricity from the local grid.

Do home solar systems need battery storage?

In fact, a majority of home solar systems aren't connected to battery storage. Here's how it works: Early morning and evening are times with lower solar production, but higher energy needs. During these times (and especially at night) solar owners without battery storage draw power from the grid, which acts as a giant energy backup system.
