

# China network battery swap station energy storage

## Overview

---

Are China's largest energy companies building a battery swap network?

Two of China's largest energy companies have announced plans to build a nationwide battery swap network, with 500 stations to be built this year, on the way to building a total of 10,000.

What is China's largest battery swapping network?

This represents the largest battery swapping network in China, with the company aiming to have 4,000 battery swap stations globally by 2025. Other Chinese automakers are also getting involved. Geely, one of China's largest car manufacturers, has launched Caocao Mobility to integrate battery swapping into its ride-hailing services.

How many battery swap stations will China build in 2025?

The two companies aim to build "no fewer" than 500 battery swap stations in 2025 alone, with a long-term goal of building out 10,000 stations to create a seamless "swap-as-fast-as-refuelling" experience for electric vehicle (EV) owners across China.

How many battery swap stations are there in China?

Chinese electric car company Nio has now built over 3,300 battery swap stations in China, but has also developed vehicles equipped with fast-charging technology (Credit: Iris Liu) The Chinese government has extended considerable financial assistance to battery swapping schemes.

How many battery swap stations does Nio have in China?

As of June 2024, Nio had installed 2,432 power swap stations in China, including 804 swap stations based on highways. This represents the largest battery swapping network in China, with the company aiming to have 4,000 battery swap stations globally by 2025. Other Chinese automakers are also getting involved.

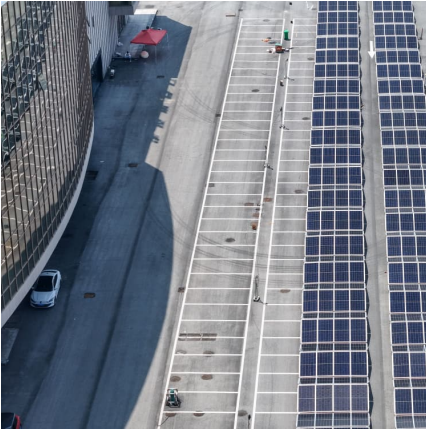

Is China a leader in battery swapping technology?

China, the world's largest EV market, has positioned itself as the leader in the development and deployment of battery swapping technology. The country's target is to exceed 16,000 battery swap stations by 2025, with rapid growth continuing beyond that.
