

Compressed air energy storage research background

Overview

The development process, working principles, research statuses and challenges of compressed air energy storage systems in different forms are comprehensively expounded, and the development trend of compressed air energy storage technology is analysed from the perspective of compressed heat storage, providing references for the design for the future systems. What is compressed air energy storage (CAES)?

Compressed air energy storage (CAES) is an effective solution for balancing this mismatch and therefore is suitable for use in future electrical systems to achieve a high penetration of renewable energy generation.

Where is compressed air stored?

Compressed air is stored in underground caverns or up ground vessels, . The CAES technology has existed for more than four decades. However, only Germany (Huntorf CAES plant) and the United States (McIntosh CAES plant) operate full-scale CAES systems, which are conventional CAES systems that use fuel in operation, .

When was compressed air first used as an energy storage medium?

As shown in Figure 2, the concept to use compressed air as an energy storage medium was first proposed in the early 1940s with the patent application “Means for Storing Fluids for Power Generation” submitted by F.W. Gay [15] to the US Patent Office and officially granted in 1948.

Can compressed air energy storage improve the profitability of existing power plants?

New compressed air energy storage concept improves the profitability of existing simple cycle, combined cycle, wind energy, and landfill gas power plants. In: Proceedings of ASME Turbo Expo 2004: Power for Land, Sea, and Air; 2004 Jun 14–17; Vienna, Austria. ASME; 2004. p. 103–10. F. He, Y. Xu, X. Zhang, C. Liu, H. Chen.

What are large-scale commercialised compressed air energy storage (CAES) plants?

Large-scale commercialised Compressed Air Energy Storage (CAES) plants are a common mechanical energy storage solution [7,8] and are one of two large-scale commercialised energy storage technologies capable of providing rated power capacity above 100 MW from a single unit, as has been demonstrated repeatedly.

Is a compressed air energy storage (CAES) hybridized with solar and desalination units?

Alirahmi, S.M.; Mousavi, S.B.; Razmi, A.R.; Ahmadi, P. A comprehensive techno-economic analysis and multi-criteria optimization of a compressed air energy storage (CAES) hybridized with solar and desalination units.
