

# **Containerized BESS project financing options in India 2026**

## Overview

---

What is the Bess funding scheme?

This scheme covers projects approved between 2023 and 2026. The funding is planned to be disbursed in five tranches: 10% upon financial closure, 45% upon achieving the Commercial Operation Date (COD), and 15% per year for the next three years from COD. Initially, the scheme aimed to support 4,000 MWh of BESS capacity.

How much will Bess cost in 2023-26?

The disbursement of funds will extend up to 2030-31 in 5 tranches. The cost of BESS system is anticipated to be in the range of ₹ 2.40 to ₹ 2.20 Crore/MWh during the period 2023-26 for development of BESS capacity of 4,000 MWh, which translates into Capital Cost of ₹ 9,400 Crores with a Budget support of ₹ 3,760 Crores.

What is the global Bess capacity in 2023?

As per the International Energy Agency (IEA), global BESS capacity was 85 GW (approximately 190 GWh) at the end of 2023 and is expected to reach 400 GW (over 1,200 GWh) by 2030 to enable the seamless grid integration of renewable energy, with the net zero 2050 emissions scenario as a target.

What is the budgetary provision for Bess in 2024-25?

For the financial year 2024-25, a budgetary provision of ₹96 crore was made for 1,000 MWh of BESS, assuming a 10% disbursement at financial closure. But with the reduction in BESS capital costs, the VGF support per MWh was lowered from ₹96 lakh to ₹46 lakh or 30% of the capital cost, whichever is less.

Why did Bess increase its capacity in 2024-25?

However, due to a decline in battery prices, the capacity was increased to 13,200 MWh without changing the total budget of ₹3,760 crore. For the

financial year 2024-25, a budgetary provision of ₹96 crore was made for 1,000 MWh of BESS, assuming a 10% disbursement at financial closure.

Will India need 236 GWh of Bess capacity by 2023?

According to the National Electricity Plan 2023, India will need 236 GWh of BESS capacity by 2031-32. This scheme is expected to support renewable energy integration and help manage electricity demand effectively, especially during peak hours when solar power is not available.
