

Cymbet solid state battery

Overview

The EnerChip CBC012 is a solid state thin film rechargeable battery. It is designed to be surface mounted (SMT) and is reflow tolerant. The EnerChip provides thousands of recharge cycles and has a fast recharge time.

The EnerChip CBC012 is a solid state thin film rechargeable battery. It is designed to be surface mounted (SMT) and is reflow tolerant. The EnerChip provides thousands of recharge cycles and has a fast recharge time.

EnerChip™ is the world's first component packaged battery available in a surface-mount technology (SMT) package that can be used like any SMT device with reflow tolerance and automated pick-and-place compatibility. EnerChip eliminates the need for unreliable coin-cell holders or leaky super-caps.

Cymbet Corporation announced today at the PCIM Europe show the successful results of in vivo biocompatibility feasibility studies that were conducted to evaluate the biological safety of the EnerChip™ Rechargeable Solid State Battery. EnerChip bare die batteries were crushed and combined into a.

Cymbet Corporation is an industry leader in thin film battery technology and energy harvesting power management solutions. Cymbet has taken solid state, thin film battery technology concepts and materials and developed a family of commercial products intended to provide new, cost-effective.

Cymbet EnerChip™ thin film rechargeable solid-state smart batteries (SSB) are an innovation in energy storage and power management. Packaged as a Surface Mount Technology (SMT) component, the EnerChip provides energy storage in a form factor and with a convenience not previously attainable using.

The Cymbet EnerChip RTC family of devices are the first single chip solutions to combine an ultra-low power Real Time Clock a Solid State Rechargeable Battery and an integrated power management integrated circuit (PMIC) into a small surface mount reflow-solderable plastic package. The EnerChip RTC.

Cymbet EnerChip?

solid-state, rechargeable thin - film batteries are a new innovation in energy storage and power management that provides energy storage in a form factor and with a convenience not previously attainable using conventional solutions such as lithium coin cells and super capacitors.
