

# **Data center energy storage china**

## Overview

---

China Telecom self-developed AI energy-saving system, precision refrigeration energy-saving cabin and other new data center energy-saving technologies, and widely used in data centers. What is the situation of data centers in China?

Considering the complication and distinction, the whole situation of data centers in China is summarized and compared including the forecast for some period. Five indexes are adopted to show the precise status of national data centers, such as energy consumption, rack number, PUE, carbon emission and CUE.

How much energy does a data center use in China?

By 2030, the energy consumption of data centers in China is expected to reach  $4.115 \times 10^{11}$  kWh. The number of data center racks in China in the past 5 years has an average annual compound growth rate of more than 30%. This number is expected to reach  $1.212 \times 10^7$  in 2025 and  $2.501 \times 10^7$  in 2030.

Why are data centres growing in China?

The rise of artificial intelligence (AI) and other technologies has driven the “surging” growth of data centres in China, with associated increases in energy demand and emissions. There were 449 data centres in China at the end of 2023, the most in the Asia-Pacific region.

How much energy does a data center use?

The energy consumption of national data centers will reach  $4.115 \times 10^{11}$  kWh by 2030 (China Electronics Standardization Institute, 2019), accounting for about 3.49% of the energy consumption of the whole society (China Electronics Standardization Institute, 2019; Shu et al., 2021).

How many data centres are there in China?

There were 449 data centres in China at the end of 2023, the most in the Asia-

Pacific region. The International Energy Agency (IEA) says in a new report that China accounted for 25% of global data-centre electricity consumption in 2024, the second largest consumer following the US.

Are China's data centres achieving 'green' energy requirements?

Since 2020, the Chinese government has tracked a range of information on data centres' energy transitions. The latest update from 2024 said more than 50 data centres nationwide have met a standard for "green" energy requirement, including one from State Grid and 14 from the country's internet companies.
