

Design of energy storage medium film

Overview

Can multilayer films achieve high energy storage densities?

However, achieving high energy storage densities remains a challenge for broader applications. This work explores the energy storage performance of multilayer films composed of 1% Mn-doped Na_{0.5}Bi_{0.5}TiO₃ (NBTM) and 1% Mn-doped SrTiO₃ (STM).

What is the recoverable energy storage density of PZT ferroelectric films?

Through the integration of mechanical bending design and defect dipole engineering, the recoverable energy storage density of freestanding PbZr_{0.52}Ti_{0.48}O₃ (PZT) ferroelectric films has been significantly enhanced to 349.6 J cm⁻³ compared to 99.7 J cm⁻³ in the strain (defect) -free state, achieving an increase of ≈251%.

How can flexible ferroelectric thin films improve energy storage properties?

Moreover, the energy storage properties of flexible ferroelectric thin films can be further fine-tuned by adjusting bending angles and defect dipole concentrations, offering a versatile platform for control and performance optimization.

Can ultra-thin multilayer structure improve energy storage performance of multilayer films?

In this study, an innovative approach is proposed, utilizing an ultra-thin multilayer structure in the simple sol-gel made ferroelectric/paraelectric BiFeO₃/SrTiO₃ (BF/ST) system to enhance the energy storage performance of multilayer films.

How can domain engineering improve energy storage performance?

A wide range of domain engineering techniques, such as introducing polar nanoregions, [12, 13] implementing superparaelectric relaxor strategies, [10, 14] and employing multilayer film stacking, [15, 16] play a crucial role in

substantially improving energy storage performance.

Does γ -ray irradiation enhance capacitive energy storage performance of polymer dielectric films?

Wang, Y. W. et al. γ -ray irradiation significantly enhances capacitive energy storage performance of polymer dielectric films. *Adv. Mater.* 36, 2308597 (2024). Wang, C. et al. Enhanced performance of all-organic sandwich structured dielectrics with linear dielectric and ferroelectric polymers. *J. Mater. Chem. A* 9, 8674–8684 (2021).
