

# **Development status of energy storage in state power investment corporation**

## Overview

---

China's first megawatt-level iron-chromium flow battery energy storage project, located in North China's Inner Mongolia autonomous region, is currently under construction and about to be put into commercial use, said its operator State Power Investment Corp. Can mega-energy storage stations ensure stable grid operations?

Li Jianwei, chief engineer of the State Power Investment Corp, said the mega-energy storage stations can ensure stable grid operations by shaving peak and modulating frequency for the power system, as power consumption during off-peak hours is at a relatively lower price.

Can new energy storage help build a new power system in China?

New energy storage, or energy storage using new technologies, such as lithium-ion batteries, liquid flow batteries, compressed air and mechanical energy, will become an important foundation for building a new power system in China, Lin said.

How many kilowatts a year is energy storage?

According to the NEA, the total installed capacity of new types of energy storage projects reached 8.7 million kilowatts with an average power storage period of 2.1 hours last year, an increase of over 110 percent from the end of 2021.

What percentage of energy is stored in a battery?

Among those, lithium-ion battery energy storage took up 94.5 percent, followed by compressed air energy storage at 2 percent and flow battery energy storage at 1.6 percent, it said.

Where can China install new energy storage capacity?

Besides Inner Mongolia, Shandong, Guangdong and Hunan provinces as well as the Ningxia Hui autonomous region are areas ranking in the first-tier group

for installing new energy storage capacity in China.

Can new energy storage complement pumped-hydro storage?

Liu Yafang, an official with the National Energy Administration, said that compared with traditional pumped-hydro storage, new energy storage can complement pumped-hydro storage and address the randomness and high volatility issues brought by the integration of new energy sources into the power system.

## Development status of energy storage in state power investment co
