## Overview

How to promote the development of the Digital Economy?

However, it also shows that in promoting the development of the digital economy, it is necessary to overcome the dependence on traditional energy sources and promote the development of renewable energy in combination with the transformation of the energy structure and environmental pollution problems.

Why do we need a digital economy?

Possible reasons are: on the one hand, the technologies and business models of hydropower, solar energy, and wind energy are relatively mature. The digital economy provides a platform for technological innovation and development in hydropower, solar, wind, and biomass.

Does the digital economy drive energy production?

Heterogeneity analysis based on resource type shows that the digital economy has a more significant driving effect on hydropower, solar, wind, and biomass energy, which have been studied less in previous research. Third, we examined the threshold effect of the digital economy.

Does the digital economy affect energy transition?

We further investigate the asymmetry and heterogeneity. Accordingly, we obtain the following research conclusions: The digital economy positively affects energy transition; in other words, a 1% increase in the digital economy will boost the renewable energy consumption structure by 0.021% and the renewable energy generation structure by 0.106%.

How does digital finance impact the energy industry?

Green investments (GIs) in the energy industry are crucial for driving a clean energy transition and fostering environmental sustainability. In the digital economy era, insufficient attention has been paid to digital finance's (DF's)

influence on GIs in energy enterprises, potentially underestimating its impact.

Is the Digital Economy a determinant of the energy transition?

Specifically, the digital economy is a determinant in the energy transition, but the energy transition promotes the flow of capital to clean energy technologies, and also accelerates the development of emerging technologies and the digital economy. In other words, the digital economy may be endogenously determined by energy transition.
