The residential battery storage market is rapidly growing, and many governments subsidize consumer adoption of batteries to accelerate the smooth integration of large amounts of solar into power grids. However, there are several questions remaining about choice of products, the structure of the.

The global market for domestic energy storage is projected to reach \$23.2 billion by 2026, growing at a compound annual growth rate (CAGR) of 24.6% from 2021. Factors such as the increasing penetration of solar photovoltaic (PV) systems and the urgent need for grid resilience in the face of climate.

The global residential energy storage market is valued at US\$ 12.2 billion in 2023 and is predicted to jump to US\$ 90 billion by 2033-end, expanding at a high-value CAGR of 22% over the decade. Batteries are used in residential energy storage systems to store excess electricity for future use.

As of the first half of 2023, the world added 27.3 GWh of installed energy storage capacity on the utility-scale power generation side plus the C&I sector and 7.3 GWh in the residential sector, totaling 34.6 GWh, equaling 80% of the

44 GWh addition last year. Despite a global installation boom.
