

# Drag pump nitrogen storage tank

## Overview

---

How do nitrogen pumps work?

Nitrogen pumps are used to suppress various gases, liquids or other dangerous elements whenever a risk assessment dictates. Our nitrogen pumps use engine power and recovered engine heat to vaporize and pump liquid nitrogen from a liquid nitrogen tank.

What is a GN2 nitrogen pumping unit?

The GN2 180K nitrogen pumping unit is a field proven, high quality, reliable unit built exclusively for Gore Nitrogen. The GN2 7800 nitrogen transport is the primary transport used by Gore Nitrogen. The 8400 nitrogen transport is used primarily as a mobile storage unit for on-location pump support.

What is a 90K nitrogen pump?

Designed and manufactured to meet the requirements of our ever-changing market and reduce overall environmental impact. The 90k nitrogen pump is a self-contained unit capable of pumping and vaporising 90,000 SCFH at 20°C and pressures up to 10,000 psi when supplied with liquid nitrogen from a suitable tank.

Which GN2 pumping unit is best for Gore nitrogen?

The GN2 270K Nitrogen Pumping Unit is a high quality, highly efficient unit designed and built exclusively for Gore Nitrogen. The GN2 180K nitrogen pumping unit is a field proven, high quality, reliable unit built exclusively for Gore Nitrogen. The GN2 7800 nitrogen transport is the primary transport used by Gore Nitrogen.

How many scfh can a nitrogen pump handle?

Our range of units are capable of pumping 60,000 to 540,000 SCFH of gaseous nitrogen with pressures up to 15,000 psi and at discharge temperature of 21°C. Liquid nitrogen is taken from a nitrogen storage/transport tank by a

centrifugal boost pump to a high-pressure triplex pump.

What is a nitrogen steam vaporizer?

The nitrogen steam vaporizer unit is available complete with an integrated boost pump package. Where high-temperature steam is available on-site, this vaporizer is the perfect solution to reducing project headcount and allowing efficient nitrogen operations.
