Abstract—With ever-increasing oil prices and concerns for the natural environment, there is a fast-growing interest in electric vehicles (EVs) and renewable energy resources (RERs), and they play an important role in a gradual transition. However, energy storage is the weak point of EVs that delays.

DOE is updating its 2022 analysis of incremental purchase costs of electrified vehicles to reflect significant reductions to electric vehicle battery costs as well as decreases in other technology costs over the past two years. This report demonstrates reduced battery costs compared to DOE's prior.

With the growth in electric vehicle sales, battery storage costs have fallen rapidly due to economies of scale and technology improvements. With the falling costs of solar PV and wind power technologies, the focus is increasingly moving to the next stage of the energy transition and an energy.
