

Energy storage business knowledge

Overview

This open-source and plain-language knowledge library now includes six handbooks explaining a range of essential topics in power project contracts, financing, and procurement. Why do energy storage companies need a business model?

Operating energy storage technologies and providing the associated services gives them a unique position in the industry once more. To succeed, however, they need to own, operate and experiment with energy storage assets and design the business models of the future.

How to make energy storage bankable?

Stacking of payments is the most common way to make the business model for energy storage bankable whilst optimizing services to the grid. In its simplest version it contains: Let the best technology provide the service(s) the grid needs. Thinking of technology first could do the grid a disservice. Long projects?

It depends.

What are business models for energy storage?

Business Models for Energy Storage Rows display market roles, columns reflect types of revenue streams, and boxes specify the business model around an application. Each of the three parameters is useful to systematically differentiate investment opportunities for energy storage in terms of applicable business models.

Why do we need a large energy storage system?

Their role is traditionally to support the energy system, where large amounts of baseload capacity cannot deliver enough flexibility to respond to changes in demand during the day. Now, these large energy storage systems deliver the flexibility to respond to the intermittency of renewable energy sources.

Is energy storage a new business opportunity?

With the rise of intermittent renewables, energy storage is needed to maintain balance between demand and supply. With a changing role for storage in the energy system, new business opportunities for energy storage will arise and players are preparing to seize these new business opportunities.

Is energy storage a profitable business model?

Although academic analysis finds that business models for energy storage are largely unprofitable, annual deployment of storage capacity is globally on the rise (IEA, 2020). One reason may be generous subsidy support and non-financial drivers like a first-mover advantage (Wood Mackenzie, 2019).
