## Overview

---

What dominated the explosion overpressure hazard in ESS container?

Peak  $P_{mfa}$  and  $P_{cv}$  dominated the explosion overpressure hazard in ESS container. The overpressure 'three-peak' structure was found outside the ESS container. The external explosion of TR gas increased the hazard outside the container. Venting dynamic pressure hazard came from the external evolution accumulation.

What is an example of an energy storage disaster?

For example, in April 2019 in Arizona, USA, a massive battery energy storage system (EES) exploded, injuring eight firefighters ; In April 2021, a tragic incident involving a thermal runaway fire and explosion of a lithium iron phosphate battery took place at the Dahongmen Energy Storage Power Station in Beijing, China.

What is a BS&B explosion vent?

Explosion Venting Protection for Battery Energy Storage Systems BS&B manufactures Ven -Saft<sup>TM</sup> explosion vents for Battery Ene / deflagration event caused by thermal reactions from release and container to safely move the explosion upward and away from the container. BS&B vents are certified to open at designated burstig.

Are lithium-ion battery ESS containers explosion safe?

In future explosion risk assessments of lithium-ion battery ESS containers, particular attention should be given to the potential for external explosion hazards caused by the vent structures.

What is the explosion-venting hazard of TR gas of lithium-ion battery?

Explosion-venting hazards of TR gas of lithium-ion battery were numerically analyzed. Peak  $P_{mfa}$  and  $P_{cv}$  dominated the explosion overpressure hazard in ESS container. The overpressure 'three-peak' structure was found outside the

ESS container. The external explosion of TR gas increased the hazard outside the container.

What happens if a gas explosion chamber has a vent?

The presence of vents typically transitions the gas explosion process in a somewhat enclosed space into a venting process. Opening a vent on a side of the explosion chamber simulated the opening process of the ventilation structure in an energy storage container.
