

Energy storage can485

Overview

What is a can485 processor?

Click the image for a closer look. The CAN485 is based on the Atmel AT90CAN128 processor. The processor runs at 16MHz, has 128KB of Flash, 4KB of SRAM and features a hardware CAN controller. The CAN485 breaks out commonly used communications ports and pin functions including: I2C, SPI, UARTs, 8 analog inputs, and 6 interrupt enabled pins.

Does can485 have a USB connection?

Once the board is powered, the PWR led will light up. Like the Pro Mini, the CAN485 has no on-board USB connection. An external FTDI breakout board is required to program the board or connect it to a PC. To connect, you would need a 5V FTDI, header pins to connect, and a mini-B USB cable.

How many pins does a can485 have?

The CAN485 breaks out commonly used communications ports and pin functions including: I2C, SPI, UARTs, 8 analog inputs, and 6 interrupt enabled pins. More information can be found on the AT90CAN128 datasheet and AST-CAN485 schematic. Note for Advanced Users: The CAN485's AT90CAN128 uses an Arduino bootloader.

How do I control 24V inputs & outputs using the can485?

If you are looking to control 24V inputs and outputs using the CAN485, check out the I/O shield (24V) for wired connections. The AST-CAN485 I/O Shield is an Arduino shield that will allow the user to interface the AST-CAN485 Dev Board with 24V inputs and outputs, which expands its usefulness into industrial systems.

How does The RS485 interface work?

The RS485 interface supports long-distance communication and multiple devices on the same bus, making it ideal for industrial and renewable energy

systems. Scenario 1: Solar Energy Storage Monitoring In solar power systems, GoldenMate Orion1000 batteries connect to solar charge controllers or energy management systems via the RS485 interface.

How many devices can RS485 support?

Long-Distance Communication □ RS485 supports communication distances of up to 1,200 meters, making it ideal for large-scale installations such as solar power plants or industrial facilities. Multi-Device Connectivity □ RS485 can support up to 16 devices on the same bus, enabling centralized monitoring of multiple batteries or components.
