

Energy storage field scale analysis

Overview

In this multiyear study, analysts leveraged NREL energy storage projects, data, and tools to explore the role and impact of relevant and emerging energy storage technologies in the U.S. power sector across a range of potential future cost and performance scenarios through the year 2050. What are large-scale battery energy storage systems (BESS)?

Abstract: Large-scale battery energy storage systems (BESS) are rapidly gaining share in the electrical power system and are used for a variety of applications, including grid services and intraday trading. The energy management system (EMS) of BESS has a strong influence on the system efficiency and battery aging.

How is bibliometric analysis performed for energy storage technologies?

For each of the five technologies, the bibliometric analysis was conducted separately using the Scopus database. Scopus has recently been employed in energy storage-related bibliometric analyses by Javed et al. and Borri et al. , among others. The analysis steps are detailed in Table 1.

What role does energy storage play in a low-carbon power grid?

Through the SFS, NREL analyzed the potentially fundamental role of energy storage in maintaining a resilient, flexible, and low carbon U.S. power grid through the year 2050.

Is energy storage the future?

The key conclusion of the research is that deployment of energy storage has the potential to increase significantly—reaching at least five times today’s capacity by 2050—and storage will likely play an integral role in determining the cost-optimal grid mix of the future.

How valuable is a field measurement dataset?

This paper contributes to both by analysing field measurements of 21 HSSs

over a measurement period of up to 8 years. The dataset is, so far, valuable for a scientific dataset in terms of measurement duration and sample rate. It consists of 106 system years represented by 14 billion data points.

Can Scopus be used for energy storage bibliometric analysis?

Scopus has recently been employed in energy storage-related bibliometric analyses by Javed et al. and Borri et al. , among others. The analysis steps are detailed in Table 1. Literature searches (Task 1) were conducted in September and October 2023 for titles, abstracts, and keywords, with various search terms tested for each technology.
