

Energy storage frequency regulation on the power generation side in luxembourg city

Overview

Do energy storage stations improve frequency stability?

With the rapid expansion of new energy, there is an urgent need to enhance the frequency stability of the power system. The energy storage (ES) stations make it possible effectively. However, the frequency regulation (FR) demand distribution ignores the influence caused by various resources with different characteristics in traditional strategies.

Is energy storage a new regulatory resource?

As a new type of flexible regulatory resource with a bidirectional regulation function [3, 4], energy storage (ES) has attracted more attention in participation in automatic generation control (AGC). It also has become essential to the future frequency regulation auxiliary service market .

Is there a multi-type energy storage configuration method for primary frequency regulation?

Therefore, a multi-type energy storage (ES) configuration method considering State of Charge (SOC) partitioning and frequency regulation performance matching is proposed for primary frequency regulation. Firstly, the Automatic Generation Control (AGC) signal is decomposed and reconstructed using the variational mode decomposition (VMD) method.

What is frequency regulation power optimization?

The frequency regulation power optimization framework for multiple resources is proposed. The cost, revenue, and performance indicators of hybrid energy storage during the regulation process are analyzed. The comprehensive efficiency evaluation system of energy storage by evaluating and weighing methods is established.

How Fr Power is distributed to each es unit?

After receiving the FR power distributed by the power grid, the ES station

redistributes it to each ES unit based on comprehensive efficiencies (Strategy I) or capacities of the ES unit (Strategy II). Table 3 represents the evaluation indicators of each ES unit in a two-hour dispatch period with different strategies.

Is Fr Power rated in regional power grid?

Assuming that the bid FR power of each ES unit is its rated power in the regional power grid.
