That makes Q1 2025 the biggest first quarter for energy storage in US history. The surge was led by utility-scale projects, which accounted for over 1.5 GW of the new capacity, a 57% jump compared to Q1 2024.

The US energy storage market just posted its strongest Q1 ever, adding more than 2 gigawatts (GW) of capacity across all segments, according to the latest US Energy Storage Monitor from Wood Mackenzie and the American Clean Power Association (ACP). That makes Q1 2025 the biggest first quarter for.

The United States Energy Storage Market size in terms of installed base is expected to grow from 49.52 gigawatt in 2025 to 131.75 gigawatt by 2030, at a CAGR of 21.62% during the forecast period (2025-2030). The United States Energy Storage Market's growth is propelled by the 30% Investment Tax.

China's energy storage sector has experienced rapid growth over the past two years and is expected to maintain strong momentum going forward, as the country continues to expand its renewable energy capacity, said industry experts. While energy storage in China has surged ahead in the past few.

Want to know why energy storage is hotter than a Tesla battery on a summer day?

Let's cut to the chase: global energy storage capacity is projected to triple by 2025, with China leading the charge like a lithium-ion-powered bullet train. But what's behind this explosive growth?

Buckle up - we're.
