

Energy storage mesh

Overview

What is mesh & how does it work?

MESH will provide long-duration energy storage solutions by combining natural gas, hydrogen, and compressed air technologies. The project is expected to contribute to national energy security by offering up to 20 terawatt-hours (TWh) of storage capacity, which equates to approximately 7% of the UK's current annual electricity demand.

What is the Marram energy storage hub (mesh)?

The Marram Energy Storage Hub (MESH) is an integrated offshore energy storage facility under development by EnergyPathways. Hydrogen and compressed air storage operations are planned to follow between 2028 and 2029. (Credit: Audio und werbung/ Shutterstock) MESH is an integrated offshore energy storage facility located of the East Irish Sea.

What is mesh & how can it help the UK economy?

MESH is set to produce homegrown UK natural gas, green hydrogen, clean ammonia and decarbonising synthetic graphite, while providing a diversified array of energy storage solutions — all vital for the government's Clean Energy 2030 Mission and the UK economy as a whole.

How will mesh help the energy industry?

MESH will convert surplus wind energy into green hydrogen and compressed air LDES, storing it for deployment when needed. This will provide dispatchable energy to the grid, reduce curtailment costs, and help lower consumer bills. Hydrogen will be used for applications including heating, industrial supply, and transport.

What technologies will be used in mesh?

MESH will incorporate integrated storage and dispatch capabilities across three technologies: natural gas, hydrogen, and compressed air. The storage

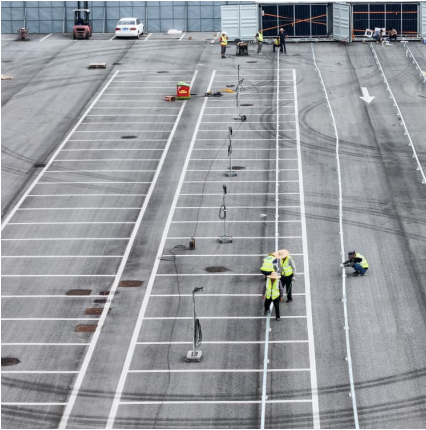

infrastructure will utilise repurposed gas production assets and new salt cavern wells. Onshore and offshore facilities will be electrified and powered by renewable electricity.

What is the Mesh Project?

The MESH project, situated 17.7km off the Lancashire coast in the UK, is envisioned as a zero-emission facility, fully decarbonised and electrified, powered by wind farms in the UK Irish Sea region, the company said.
