

# **Energy storage sector is undervalued**

## Overview

---

While energy storage is already being deployed to support grids across major power markets, new McKinsey analysis suggests investors often underestimate the value of energy storage in their business cases.

While energy storage is already being deployed to support grids across major power markets, new McKinsey analysis suggests investors often underestimate the value of energy storage in their business cases.

The revenue potential of energy storage is often undervalued. Investors could adjust their evaluation approach to get a true estimate—improving profitability and supporting sustainability goals. As the global build-out of renewable energy sources continues at pace, grids are seeing unprecedented.

Global electricity output is set to grow by 50 percent by mid-century, relative to 2022 levels. With renewable sources expected to account for the largest share of electricity generation worldwide in the coming decades, energy storage will play a significant role in maintaining the balance between.

The decline in the energy storage sector can be attributed to several critical factors: 1. Increased competition from renewable sources, 2. Regulatory challenges and uncertainties, 3. Technological limitations inhibiting widespread adoption, 4. Economic downturns affecting investment in storage.

The Energy Storage Market size is estimated at USD 295 billion in 2025, and is expected to reach USD 465 billion by 2030, at a CAGR of 9.53% during the forecast period (2025-2030). This scale-up rests on falling battery pack prices, policy incentives that reward standalone storage, and a rising.

The global energy storage systems market recorded a demand was 222.79 GW in 2022 and is expected to reach 512.41 GW by 2030, growing at a CAGR of 11.6% from 2023 to 2030. Growing demand for efficient and competitive energy resources is likely to propel market growth over the coming years. The Asia. Should energy storage be undervalued?

The revenue potential of energy storage is often undervalued. Investors could adjust their evaluation approach to get a true estimate—improving profitability and supporting sustainability goals.

How big is the energy storage industry?

Energy storage systems (ESS) in the U.S. was 27.57 GW in 2022 and is expected to reach 67.01 GW by 2030. The market is estimated to grow at a CAGR of 12.4% over the forecast period. The size of the energy storage industry in the U.S. will be driven by rising electrical applications and the adoption of rigorous energy efficiency standards.

Do investors underestimate the value of energy storage?

While energy storage is already being deployed to support grids across major power markets, new McKinsey analysis suggests investors often underestimate the value of energy storage in their business cases.

Is energy storage the future of the power sector?

Energy storage has the potential to play a crucial role in the future of the power sector. However, significant research and development efforts are needed to improve storage technologies, reduce costs, and increase efficiency.

What challenges does the energy storage industry face?

The energy storage industry faces several notable limitations and gaps that hinder its widespread implementation and integration into power systems. Challenges include the necessity for appropriate market design, regulatory frameworks, and incentives to stimulate investment in energy storage solutions.

Will energy storage grow in 2024?

The energy storage sector maintained its upward trajectory in 2024, with estimates indicating that global energy storage installations rose by more than 75%, measured by megawatt-hours (MWh), year-over-year in 2024 and are expected to go beyond the terawatt-hour mark before 2030.

## Energy storage sector is undervalued
