

# Energy storage system fire detection

## Overview

---

In the BESS application each sample pipe extends from the FDA detector to monitor specific areas of interest. It is key to mount the pipe/sample holes where the smoke and off-gas particles will appear. This is largely dependent on battery enclosure geometry and HVAC.

detectors can be several hundred times more sensitive than traditional point type smoke detectors. The Siemens Aspirated Off-Gas Particle detector presented uses a patented optical dual.

A patented smoke and particle detection technology which excels at smoke and lithium-ion battery off-gas detection.

Using a unique aspirator, a portion of air is drawn into the sample pipe network which mounted on the lithium-ion battery racks and passed into a.

A holistic approach using advanced detection and performance-based solutions combined with battery management systems can work together to establish layers of safety and fire protection. Battery Management Systems monitor voltage, current, and temperature to identify any battery abuse factors.
