What should be included in a contract for an energy storage system?

Several points to include when building the contract of an Energy Storage System:

- Description of components with critical technical parameters: power output of the PCS, capacity of the battery etc.
- Quality standards: list the standards followed by the PCS, by the Battery pack, the battery cell directly in the contract.

Does industry need standards for energy storage?

As cited in the DOE OE ES Program Plan, “Industry requires specifications of standards for characterizing the performance of energy storage under grid conditions and for modeling behavior. Discussions with industry professionals indicate a significant need for standards .” [1, p. 30].

How can utilities specify ESS characteristics?

As stated earlier, EPRI ESIC has developed detailed energy storage specifications which utilities can use to specify ESS characteristics. The utilities, in their request for proposals, can specify which standards apply to meet the technical specifications.

What safety standards affect the design and installation of ESS?

As shown in Fig. 3, many safety C&S affect the design and installation of ESS. One of the key product standards that covers the full system is the UL9540 Standard for Safety: Energy Storage Systems and Equipment . Here, we discuss this standard in detail; some of the remaining challenges are discussed in the next section.
