

Energy storage type 2022

Overview

The so-called new type of energy storage technology refers to electrochemical energy storage, compressed air, flywheel, and thermal (cold) energy storage, but does not include pumped hydro storage measure. In 2022, China released a number of policies to promote new type energy storage development. How many flywheel energy storage systems are there in 2022?

In 2022, the United States had four operational flywheel energy storage systems, with a combined total nameplate power capacity of 47 MW and 17 MWh of energy capacity. Two of the systems, one in New York and one in Pennsylvania, each have 20 MW nameplate power capacity and 5 MWh of energy capacity.

How many energy storage projects are planned in 2023?

All other planned energy storage projects reported to EIA in various stages of development are BESS projects and have a combined total nameplate power capacity additions of 22,255 MW planned for installation in 2023 through 2026. About 13,881 MW of that planned capacity is co-located with solar photovoltaic generators.

Which energy storage technologies are included in the 2020 cost and performance assessment?

The 2020 Cost and Performance Assessment provided installed costs for six energy storage technologies: lithium-ion (Li-ion) batteries, lead-acid batteries, vanadium redox flow batteries, pumped storage hydro, compressed-air energy storage, and hydrogen energy storage.

How can energy storage support the global transition to clean electricity?

To support the global transition to clean electricity, funding for development of energy storage projects is required. Pumped hydro, batteries, hydrogen, and thermal storage are a few of the technologies currently in the spotlight.

How big will electrochemical energy storage be by 2027?

Based on CNESA's projections, the global installed capacity of electrochemical energy storage will reach 1138.9GWh by 2027, with a CAGR of 61% between 2021 and 2027, which is twice as high as that of the energy storage industry as a whole (Figure 3).

How much money did energy storage companies raise in 2022?

In 2022, they accounted for 90% of global energy storage-related fundraising deals (China for 46%, the US for 31%, and Europe for 13% respectively), raising USD 2.9 billion, USD 2 billion, and USD 800 million, respectively (Figure
