

Expected ROI of industrial battery cabinet project in New Zealand 2030

Overview

Why should New Zealand invest in grid-scale batteries?

Additionally, these batteries, alongside more renewable generation, will help off-set the retirement of thermal generation and support New Zealand's transition to a low-emissions economy. The first grid-scale battery was commissioned in 2023 by Hamilton lines company WEL Networks.

What is the NZ battery project?

40 The NZ Battery Project aims to reduce New Zealand's greenhouse gas emissions and, hence, contribute to global emission reduction and net climate benefit. Any large-scale hydro development requires balancing its impacts against benefits. 44 Lake Onslow is also an important cultural, social and landscape asset.

How much will batteries be invested in the Nze scenario?

Investment in batteries in the NZE Scenario reaches USD 800 billion by 2030, up 400% relative to 2023. This doubles the share of batteries in total clean energy investment in seven years. Further investment is required to expand battery manufacturing capacity.

How does innovation affect battery storage?

Innovation reduces total capital costs of battery storage by up to 40% in the power sector by 2030 in the Stated Policies Scenario. This renders battery storage paired with solar PV one of the most competitive new sources of electricity, including compared with coal and natural gas.

How much energy storage is needed to Triple renewables?

To facilitate the rapid deployment of new solar PV and wind power that is necessary to triple renewables, global energy storage capacity must increase sixfold to 1 500 GW by 2030. Batteries account for 90% of the increase in storage in the Net Zero Emissions by 2050 (NZE) Scenario, rising 14-fold to 1

200 GW by 2030.

Are batteries a key role in energy transitions?

Batteries are set to play a leading role in secure energy transitions. They are critical to achieve commitments made by nearly 200 countries at COP28 in 2023. Their commitments aim to transition away from fossil fuels and by 2030 to triple global renewable energy capacity and double the pace of energy efficiency improvements.
