

## Overview

---

Will Poland become a hotbed of energy storage project development?

Poland, Europe's tenth-largest economy, is set to become a hotbed of energy storage project development as the share of renewable energy on its grid soars. The country built out a record 1.2 GW of onshore wind power in 2023, according to industry body WindEurope, bringing its total installed capacity to around 9.4 GW.

Will Poland's wind power industry be able to decarbonise by 2030?

As we can see, the Polish wind power industry has been very dynamic recently. The government wants it to play a major role in decarbonisation of Poland by 2030, lifting some burden off solar power which has become the main driver of the Polish renewable energy growth over the last few years.

What are the opportunities in off-shore wind development in Poland?

We see huge opportunities in off-shore wind development. The installed capacity in Poland's projects may reach 5,9 GW in 2030 r. and approx. 11 GW in 2040. The condition for increasing the share of renewable energy sources is to guarantee flexible reserve capacity, development of network infrastructure and energy storage.

Will Poland increase onshore wind power capacity in 2030?

Particularly ambitious are the plans for increased onshore wind power capacity in 2030. In the original plan, published back in 2019, the Ministry of Climate and Environment expected Poland to reach 9.6 GW of power by 2030. This objective is already obsolete as the total power of Polish wind farms exceeded 10 GW in 2024.

How much solar capacity will Poland have by 2030?

Opportunities in a Growing Market Poland is projected to reach 28.5 GW of installed solar capacity by 2030, driven by utility-scale projects which are

expected to grow at an impressive rate.

What is Poland's offshore wind energy potential?

Poland's offshore wind energy potential is estimated at 33 GW, with 6 GW of installed capacity already in progress. By 2040, offshore wind could provide 57% of Poland's electricity demand. By 2030, RES installations are expected to comprise 57% of Poland's electricity generation capacity, up from 44% in 2023.

## Expected ROI of wind solar storage project in Poland 2030
