Overview

Can energy storage be used in small nonresidential systems?

While this paper focuses on residential energy storage, some of the same ESSs may be used in small nonresidential systems. Nonresidential installations include installations at industrial sites, commercial buildings, nonprofits, government buildings, and similar locations, and do not include utility installations.

How many MWh is a residential energy storage system?

The data set totals 263 MWh, and covers all or a portion of installations in 20 states and the District of Columbia. WoodMac estimated that U.S. residential energy storage installations were 540 MWh in 2020, though an exact share of the market is not calculated here due to differences in the data such as when systems are considered installed.

Are ESS battery imports based on residential & nonresidential installations?

These data are based on companies supplying systems for residential installations, though they also include some batteries for nonresidential installations as some companies supply both market segments. The data are only for battery imports that could be specifically identified as being used in domestic ESS assembly.
