

Good news for energy storage batteries

Overview

The good news is that, in theory, the materials in batteries are nearly 100% recyclable. The tougher news is that it is currently cheaper to mine the raw materials for lithium-ion batteries than it is to recycle them.

Two energy storage topics appeared to come up in conversation more than any other at the first day of RE+: US domestic content and the race for energy density increases. It's still too early to see the financial impact on energy storage suppliers in the wake of Trump's tariffs and legislation.

China, which already boasts the world's largest energy-storage capacity, is set to nearly double that level by 2027, with an anticipated investment of 250 billion yuan (US\$35 billion), according to Beijing's latest action plan. As outlined in the action plan, China's "new-energy storage system".
