

Harbor energy storage project

Overview

Harbour Energy has completed the drilling of a storage appraisal well in the Havstjerne CO₂ storage licence in the Norwegian North Sea. Early results confirm a suitable reservoir quality for injection and storage of carbon dioxide. Why should you invest in Harbour Energy?

Harbour Energy has a leading CO₂ storage position in Europe and the UK with net storage resources of over 650 million tonnes of CO₂. It offers the potential for long-term and stable cash flows which are complementary to Harbour's business and provide a diversity of revenue that is not linked to oil and gas prices.

When will Harbour Energy develop a saline aquifer storage unit?

Harbour Energy mentions that the concept for the development of the saline aquifer storage unit is slated to be finalized by 2025. After the finalization of the concept, the company should submit a field development plan to the Norwegian Energy Ministry. In addition to this, the company will also be required to apply for an exploitation license.

Does harbour have an interest in greenstore CCS in Denmark?

Harbour also has an interest in the cost-advantaged, onshore Greenstore CCS project in Denmark, which is being progressed through the appraisal work programme. Harbour has a 40% operator interest, with Ineos as our non-operated partner alongside the Danish state.
