

How much oil can be stored on the construction site

Overview

Where should oil be stored?

Store all chemicals within a bund or drip tray. You must site your oil storage where there is minimal risk of collision from vehicles or plant. Bunds at construction sites Fuel, oil and chemical storage facilities should be located on impermeable surfaces with controlled drainage, away from storm water sewers, grids, channels and watercourses.

How many gallons of oil can be stored inside a building?

A total of not more than 100,000 gallons (378 541.2 L) shall be stored inside of any building. Oil storage inside of buildings shall also comply with applicable requirements of Sections 1305.11.1.1 through 1305.11.1.3. The maximum size of each below-ground oil-storage tank inside of a building shall be 35,000 gallons (132 489.4 L).

Is oil subject to bulk storage requirements?

Operational use of oil is not subject to the rule's bulk storage requirements. (See §112.8 for bulk storage requirements). The shell capacity of the container (maximum volume) must be considered and not the actual amount of product stored in the container (operational volume).

How far away should a temporary oil tank be from a building?

Temporary oil and gas tanks should be at least 50 feet away from any structure; this is an important requirement to keep track of for safety reasons. This distance requirement also applies to anything being directly filled from the tank. Also, temporary construction site fuel storage tanks must have a secondary containment system for certain fuels.

What are OSHA fuel storage requirements?

With that, OSHA fuel storage requirements that for portable fuel tanks, no more than 25 gallons of fuel be kept on one site outside of approved areas.

This would apply to an area with storage cabinets and storage sections for fuel. Whereas a construction site, fuel storage must be in smaller amounts.

Should you store fuel on a construction site?

Storing fuel on-site is a convenient option but there are specific requirements and regulations that you are required by law to follow regarding fuel storage on construction sites. Risks significantly increase when you incorrectly store and transfer fuel. It's a fire hazard and could result in property damage, injury, or fatalities.
