

# **How to disassemble the energy storage power supply fan**

## Overview

---

Using the 2mm Hex Key, remove the four screws located on the four corners on the bottom (fan side) of the power supply. Using the 2.5 mm Hex Key, remove the four screws holding the fan and its vent on the power supply. Use a flat head screwdriver under the tab to remove the top from the bottom. How do I replace a PSU fan?

Replacement PSU fan: Measure the dimensions of your existing fan and ensure that the replacement fan matches those specifications. You can find replacement fans at your local computer hardware store or order online.

How do I replace a fan?

After you buy the replacement fan, you can remove the old fan from the power supply. If the fan is connected via a header on the PCB, you can simply unplug it and plug in the new fan. In my case it was soldered directly. If this is the case, make sure you get the same type of connector for the new fan.

Should you replace a faulty PSU fan?

By replacing the faulty PSU fan, you have taken a proactive step towards maintaining the health and performance of your computer system. The new fan will contribute to proper cooling, preventing overheating and potential damage to important components.

How do I unplug a power supply?

In some cases (like branded PCs), there is no need to unscrew the power supply, you can unplug it by removing the plastic tabs holding it down. Now that you have the power supply out, you can remove the cover to get at the fan. Note that opening the cover will void the warranty. The case is usually opened by unscrewing the top.

How do you clean a PSU fan?

Thermal paste: It's a good idea to have some thermal paste on hand to apply

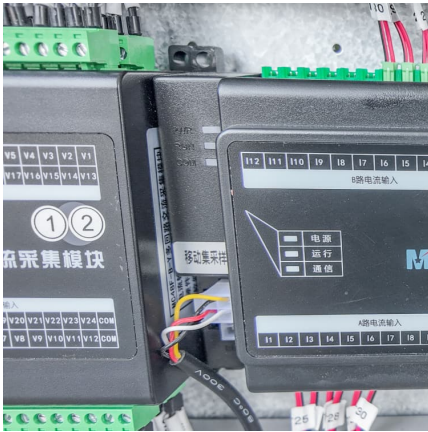

between the fan and the heat sink to ensure proper heat transfer. Clean cloth or compressed air: You'll need a clean cloth or compressed air to remove any dust or debris from the PSU and other components.

How do you remove a power supply from a PC?

First remove the screws connecting the power supply to the case at the back of the PC. Once these are out, you can lift out the power supply. In some cases (like branded PCs), there is no need to unscrew the power supply, you can unplug it by removing the plastic tabs holding it down.
