

Intelligent release device energy storage and release

Overview

What is the free release of stored energy in a spiral spring?

The free release of stored energy in a spiral spring is spontaneous, during which the stored energy can be released completely in a very short time and the output speed and torque change rapidly.

What are the functions of elastic storage device using spiral spring?

The principal functions of elastic storage device using spiral spring are energy storage and transfer in space and time. Elastic energy storage using spiral spring can realize the balance between energy supply and demand in many applications.

Why do we need emergency energy storage devices?

Even for electrical grids, there may be accidental power loss due to earthquakes or floods, in which case emergency energy equipment provides urgent power for disaster relief and medical first aid. In fact, some traditional energy storage devices are not suitable for energy storage in some special occasions.

What is elastic energy storage – electric power generation system?

With the elastic energy storage–electric power generation system, grid electrical energy can drive electric motors to wind up a spiral spring group to store energy when power grid is adequate, and the stored energy can drive electric generators to generate electrical energy when power grid is insufficient. The working principle is shown in Fig. 2.

What is the future of elastic energy storage technology?

Future researches and developments on elastic energy storage technology can focus on new materials and structures, the mechanical properties and structural dynamics analyses, design and control for new functions.

What are environmental kinetic energy harvesters using spiral spring devices?

Environmental kinetic energy harvesters using spiral spring devices were designed to collect and store the unstable and random ambient moving energy. Let us consider wave energy as an example; a pendulum-type wave energy harvester using elastic energy storage was introduced in the reference
