

# **LFP battery system tender price in Greece 2030**

## Overview

---

The bidding price for projects is capped at 145,000 euros per MWh, and the tender is open to standalone battery storage proposals with four-hour storage capacities.

The bidding price for projects is capped at 145,000 euros per MWh, and the tender is open to standalone battery storage proposals with four-hour storage capacities.

Battery energy storage systems (BESS) License: CC0 1.0 Universal (CC0 1.0) Public Domain Dedication. The scheme will offer EUR 153.7 million (USD 157.6m) in financing, the Ministry of Environment and Energy said on Monday. Applications will be accepted by February 28, 2025. The programme called.

LFP spot price comes from the ICC Battery price database, where spot price is based on reported quotes from companies, battery cell prices could be even lower if batteries are purchased in high volume. Estimated cell manufacturing cost uses the BNEF BattMan Cost Model, adjusting LFP cathode prices.

Jon Ferris, LCP Delta's Head of Flexibility and Storage, looks at the dynamics which could play out in rounds two and three in Europe's fourth largest market by 2030 pipeline. Greece: fourth largest 2030 BESS pipeline in Europe Greece has emerged as one of the countries with the largest pipeline of.

NOTE: Theoretical material costs based on battery-grade chemical prices and cathode material requirements. DATA: CRU March 2023. Nxx = Nickel-based (NMC/NCA/NMCA) LFP ~50% of China market. Mass adoption of LFP ex.China will not be until ~2025 DATA: CRU March 2023. Nxx = Nickel-based (NMC/NCA/NMCA).

Starting in May 2023, Greek households and farmers are able to apply for public funds to cover the purchase and installation of small solar+storage systems up to 10.8kW (featuring up to 10.8kWh of storage). The grants can cover up to 75% of total cost of a system.<sup>10</sup> The total budget available is. Why is Greece launching a battery storage auction?

Initially a response to the COVID 19 pandemic, the focus has pivoted to support Greece's green energy transition. The storage auctions themselves require further approval under EU State aid rules. The pipeline of prospective battery storage projects now approaches 27GW, with over 500 projects granted a storage license.

How much battery storage will Europe have by 2030?

However, based on current policies, the country looks set to hit only 4.8GW of operational battery storage capacity by 2030, as shown in the above infographic from LCP Delta's STOREtrack market intelligence platform covering energy storage across Europe.

How much does a LFP cell cost?

The price of LFP cells is over 20% lower than nickel cobalt manganese (NCM) cells. The average price of an LFP cell was just under \$60/kWh in 2024. Currently, Greater China has a near monopoly in LFP cell manufacturing, considering the negligible LFP production capacity in Europe and North America.

How much does an LFP cell cost in 2024?

The average price of an LFP cell was just under \$60/kWh in 2024. Currently, Greater China has a near monopoly in LFP cell manufacturing, considering the negligible LFP production capacity in Europe and North America. However, LFP production capacity is poised to expand, especially in Europe, through this decade.

Where does LFP spot price come from?

LFP spot price comes from the ICC Battery price database, where spot price is based on reported quotes from companies, battery cell prices could be even lower if batteries are purchased in high volume. Estimated cell manufacturing cost uses the BNEF BattMan Cost Model, adjusting LFP cathode prices with ICC cathode spot prices.

Will LFP increase the global average price of LFP cells?

The addition of LFP capacities outside of Greater China will raise the global average price of LFP cells in the midterm, but as the manufacturing cost is brought under control through process improvements, the global LFP average cell price will gradually fall below the current level.

## LFP battery system tender price in Greece 2030
